Customer Journey Map

This map describes how a healthcare professional (clinical risk assessment officer) moves from identifying a need to analyse patient data; using the Tableau dashboard, to gain insights and make informed decisions for better patient outcomes. It records actions, touchpoints; thoughts, feelings, process ownership, and opportunities for improvement at each stage.

Phase of Journey	Stage 1 Identify the question	Stage 2 Explore the data	Stage 3 Interpret and use insights
Actions *What does the customer do?*	• Defines the analysis goal (e.g., identify high-risk patients, study disease patterns). • Looks at available data sources and selects relevant parameters (age, BMI, lifestyle, etc.). • Opens the Tableau dashboard and sets filters for the required view.	• Explores different charts and visualizations on the dashboard. • Applies filters and compares data across age groups, BMI categories, and risk factors. • Looks for patterns, trends and anomalies in the data.	• Interprets the visual insights and identifies key risk factors and trends. • Draws conclusions to support clinical decisions or recommendations. • Saves or shares the insights for further discussion or action.
Touchpoint *What part of the service do they interact with?*	• Project documentation / briefing. • Dataset and data source (Excel/CSV). • Tableau dashboard (filters, parameters).	• Tableau interactive charts and visualizations. • Filters and comparison options. • Data labels, tooltips and metrics.	• Dashboard summary and key insights. • Export / share options. • Discussion with team / stakeholders.
Customer Thought *What is the customer thinking?*	• "Which indicators are most important to identify high-risk patients?" • "Will this data give a clear and accurate picture?"	• "Do I see any patterns across age groups or lifestyle factors?" • "Are there any unusual trends or outliers I should check?"	• "What do these insights mean for patient care?" • "Which groups are at higher risk?" • "How can I use this information to make better decisions?"
Customer Feeling *What is the customer feeling?*	Curious and motivated, but slightly uncertain about how much data is relevant and where to focus.	More engaged and focused, but may feel overwhelmed by the amount of information or need deeper clarity on certain trends.	Confident when insights are clear and actionable, but may feel cautious if data seems complex or open to multiple interpretations.
