Project Design Phase-II
Data Flow Diagram & User Stories

Date	27 October 2026
Team ID	
Project Name	Health360: Comprehensive Healthcare Risk & Disease Analytics
Maximum Marks	4 Marks

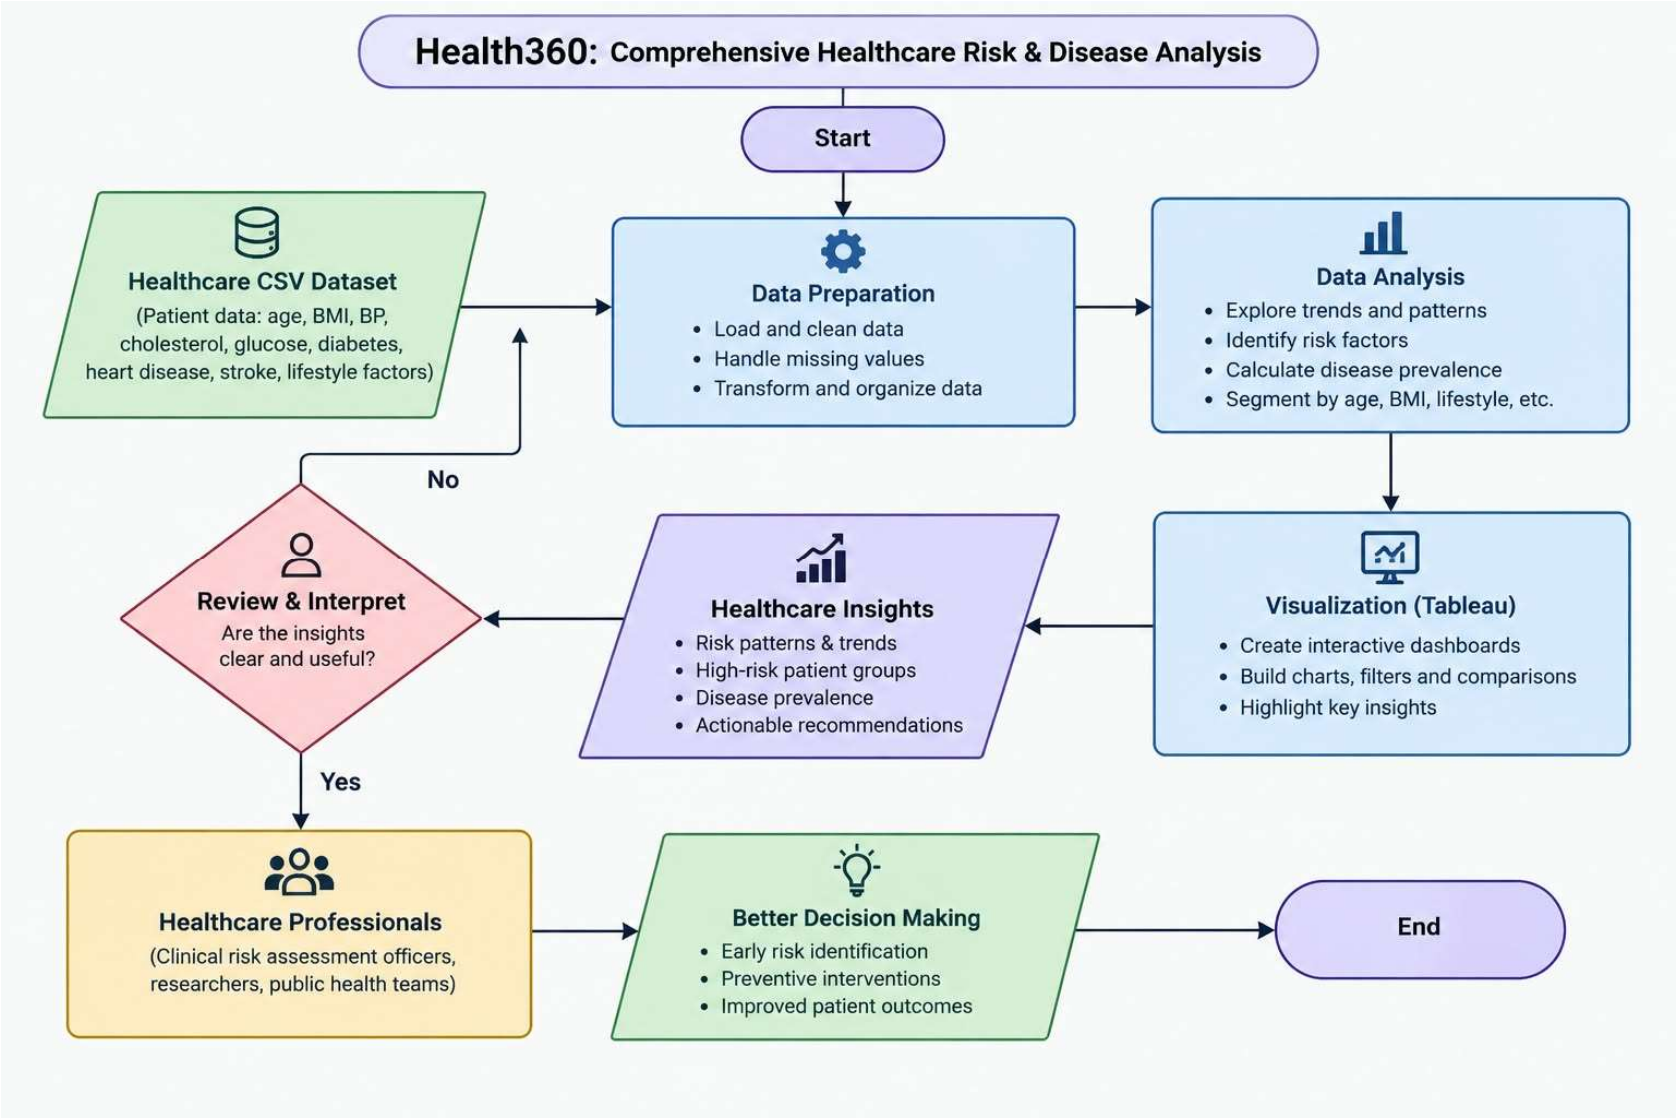

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	**External Entity**	Represents healthcare professionals, clinical risk assessment officers, and public health researchers who interact with the Health360 dashboard to access patient health insights.
Rectangle with numbered header	**Process**	Represents operations such as importing healthcare data, analyzing patient demographics, calculating disease prevalence, and generating interactive
Rectangle (solid fill, no number)	**Data Store**	Represents the healthcare CSV dataset containing patient information, including age, BMI, blood pressure, cholesterol, glucose, diabetes, heart disease, stroke, and lifestyle factors.

Labeled arrow	**Data Flow**	Represents the movement of patient data from the CSV dataset into Tableau for processing, visualization, and presentation of healthcare risk insights to users.

Health360: Comprehensive Healthcare Risk & Disease Analysis
Start
Healthcare CSV Dataset
(Patient data: age, BMI, BP, cholesterol, glucose, diabetes, heart disease, stroke, lifestyle factors)
Data Preparation
Load and clean data
Handle missing values
Transform and organize data
Data Analysis
Explore trends and patterns
Identify risk factors
Calculate disease prevalence
Segment by age, BMI, lifestyle, etc.
Visualization (Tableau)
Create interactive dashboards
Build charts, filters and comparisons
Highlight key insights
Healthcare Insights
Risk patterns & trends
High-risk patient groups
Disease prevalence
Actionable recommendations
Review & Interpret
Are the insights clear and useful?
No
Yes
Healthcare Professionals
(Clinical risk assessment officers, researchers, public health teams)
Better Decision Making
Early risk identification
Preventive interventions
Improved patient outcomes
End
