Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	27 October 2026
Team ID	
Project Name	Health360: Comprehensive Healthcare Risk & Disease Analytics
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)	Priority (High/Medium/Low)
1	Data Access & Integration	Import the healthcare CSV dataset into Tableau, including patient demographics, clinical indicators, disease conditions, and lifestyle factors.	High
2	Data Processing	Clean and organize patient data, handle missing values, and categorize patients by age group, BMI category, and exercise level for analysis	High
3	Business Analysis	Calculate total patients, diabetes, heart disease, and stroke cases. Analyze disease prevalence, average blood pressure, and relationships between lifestyle factors and health conditions.	High
4	Business Insights & Analytical Outputs	Develop interactive Tableau dashboards displaying disease prevalence, BMI-based risk patterns, exercise distribution, and age-group comparisons using charts, KPIs, and heatmaps.	High
5	User Interaction & Analysis	Enable users to filter and compare healthcare data by age group, BMI category, and disease conditions through interactive Tableau dashboards.	High
6	Data Update & Reporting	Allow healthcare data to be refreshed when the source dataset is updated and support sharing dashboards and analytical findings through Tableau Public.	Medium

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	The dashboard should provide a clear, user-friendly interface with readable charts, meaningful labels, and simple navigation for healthcare professionals.
NFR-2	**Security**	Patient data should be handled responsibly, using anonymized datasets and avoiding the public disclosure of personally identifiable medical information.
NFR-3	**Reliability**	The dashboard should display accurate and consistent results, with correct calculations, data aggregations, and visualizations across worksheets
NFR-4	**Performance**	Dashboards, filters, and interactive visualizations should load and respond efficiently without unnecessary delays.
NFR-5	**Availability**	The dashboard should be accessible through Tableau Public when published, subject to internet connectivity and platform availability.
NFR-6	**Scalability**	The system should support increasing volumes of healthcare data and additional patient records while maintaining efficient dashboard performance and accurate data analysis in Tableau.
