Project Design Phase-I
Problem – Solution Fit Template

Date	27 October 2026
Team ID	
Project Name	Health360: Comprehensive Healthcare Risk & Disease Analytics
Maximum Marks	2 Marks

Problem – Solution Fit

Overview:

Smart Healthcare & Risk Factor Analysis focuses on transforming complex healthcare data into meaningful insights using Tableau. The project helps users understand health trends, identify potential risk factors, and explore relationships between different health indicators through interactive dashboards and visualizations.

Purpose:

- Identify Health Risks: Analyze healthcare data to recognize patterns and potential risk factors.

- Simplify Complex Data: Convert raw healthcare information into clear, understandable visualizations.

- Support Data-Driven Decisions: Provide meaningful insights to improve healthcare awareness and decision-making.

- Explore Health Trends: Understand relationships between various health indicators using interactive dashboards.

- Improve Accessibility: Present healthcare insights through an interactive Tableau Story and dashboard.

- Promote Preventive Healthcare: Encourage awareness of health risks through data analysis and visualization.

Define & Understand

1. CUSTOMER SEGMENT(S) — CS

- Healthcare analysts & data enthusiasts
- Students / researchers
- Healthcare professionals
- Policy makers & decision makers

Key Need
Understand health trends, risk factors and patterns through clear visualizations.

6. CUSTOMER CONSTRAINTS — CC

- Limited data access / incomplete records
- Data quality issues (missing values, duplicates, inconsistencies)
- Privacy and security concerns
- Time and resource limitations

Key Constraint
Ensure data privacy, maintain accuracy and deliver meaningful insights within scope.

8. AVAILABLE SOLUTIONS — AS

- Data cleaning and preparation
- Exploratory data analysis
- Visualizations using Tableau Public
- Interactive dashboard and story

Solution Approach
Transform raw data into an easy-to-explore, interactive visual experience using Tableau.

Explore & Visualize

Poblem the Problem

2. JOBS-TO-BE-DONE / PROBLEMS — J&P

- Identify patterns in healthcare data
- Explore relationships between health indicators and risk factors
- Make complex data easier to understand

The Problem
Raw healthcare data is difficult to interpret without proper analysis and visualization.

9. PROBLEM ROOT CAUSE — RC

- Fragmented and unstructured data
- Lack of meaningful visual representation
- Difficulty in identifying trends and risk factors

Root Cause
Data is not organized or visualized in a way that highlights important insights.

7. BEHAVIOUR — BE

- Use data to track health trends
- Compare different health indicators
- Explore insights interactively
- Share findings for better decision-making

Expected Behaviour
Engage with the dashboard and story to explore data, find patterns and gain insights.

Plan & Execute

Identify & Plan

3. TRIGGERS — TR

- Growing interest in preventive healthcare
- Need for data-driven decision making
- Availability of healthcare datasets
- Demand for interactive analytics tools

4. EMOTIONS BEFORE / AFTER — EM

Before
- Confusion
- Difficulty in identifying patterns
- Overwhelmed by raw data

After
- Clarity
- Better understanding
- Confidence in insights

10. YOUR SOLUTION — SL

- Data preparation and analysis
- 7-section Tableau Story
- Consolidated interactive dashboard
- Clear and accessible visual insights

Unique Value
Transforms complex healthcare data into a structured, interactive and easy-to-explore visual journey.

2. CHANNELS of BEHAVIOUR — CH

- Tableau Public (web-based)
- Screen recording for demonstration
- Accessible on desktop and mobile

Access
Available online for easy sharing and exploration.

Deliver & Create Impact
