Team ID	
Project Title	Health360: Comprehensive Healthcare Risk & Disease Analytics
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

Project Overview	
Objective	To develop an interactive Tableau dashboard for analyzing healthcare data, identifying disease patterns, and supporting informed healthcare decisions.
Scope	Analysis of heart disease, diabetes, and stroke using patient demographics, clinical indicators, and lifestyle factors through interactive visualizations.
Problem Statement	
Description	Analyzing large healthcare datasets manually is time-consuming and makes identifying disease trends and potential risk factors challenging.
Impact	Improves healthcare data interpretation, supports early risk identification, and enables better preventive healthcare planning.
Proposed Solution	
Approach	Import and process healthcare CSV data using Tableau Public, apply calculated fields, and develop interactive dashboards for risk analysis.

Key Features	• Interactive healthcare dashboards and filters. • Disease prevalence and risk factor analysis. • Patient demographics and lifestyle comparisons. • KPI cards, charts. • Tableau Story for presenting healthcare insights

Resource Requirements

Resource Type	**Description**	**Specification/Allocation**
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Intel Core i3/i5 or equivalent
Memory	RAM specifications	8 GB
Storage	Disk space for data, models, and logs	10 GB available storage
Software		
Frameworks	Python frameworks	Tableau Public
Libraries	Additional libraries	Build in functions and calculated fields
Development Environment	IDE, version control	Tableau Public Desktop
Data		
Data	Source, size, format	Healthcare CSV datasets
