| Date | 27 October 2026 |
| Team ID | |
| Project Name | Health360: Comprehensive Healthcare Risk & Disease Analytics |
| Maximum Marks | 4 Marks |

## Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions.

**Component Description Table**

| Component Name | Description / Role in Architecture | Technology Used |
|---|---|---|
| Data Source | Contains healthcare data, including patient information, health indicators, and associated risk factors | HealthCare dataset |
| Data Ingestion | Imports and connects healthcare datasets to the system for further processing and analysis | Tableau Public |
| Data Processing | Organizes and prepares the data by handling inconsistencies, formatting fields, and ensuring data quality. | Tableau Public |
| Data Analysis | Examines healthcare indicators and risk factors to identify patterns, trends, and relationships in the dataset. | Tableau Public |
| Data Visualization | Presents analytical results through charts, graphs, KPIs, and other visual representations. | Tableau Public |
| User Interface | Provides an interactive dashboard with filters and visual elements for users to explore healthcare data. | Tableau Public |
| Health Insights | Highlights key findings and potential risk patterns to support data-driven healthcare understanding | Tableau Public |
