Business Question and Visualization Report

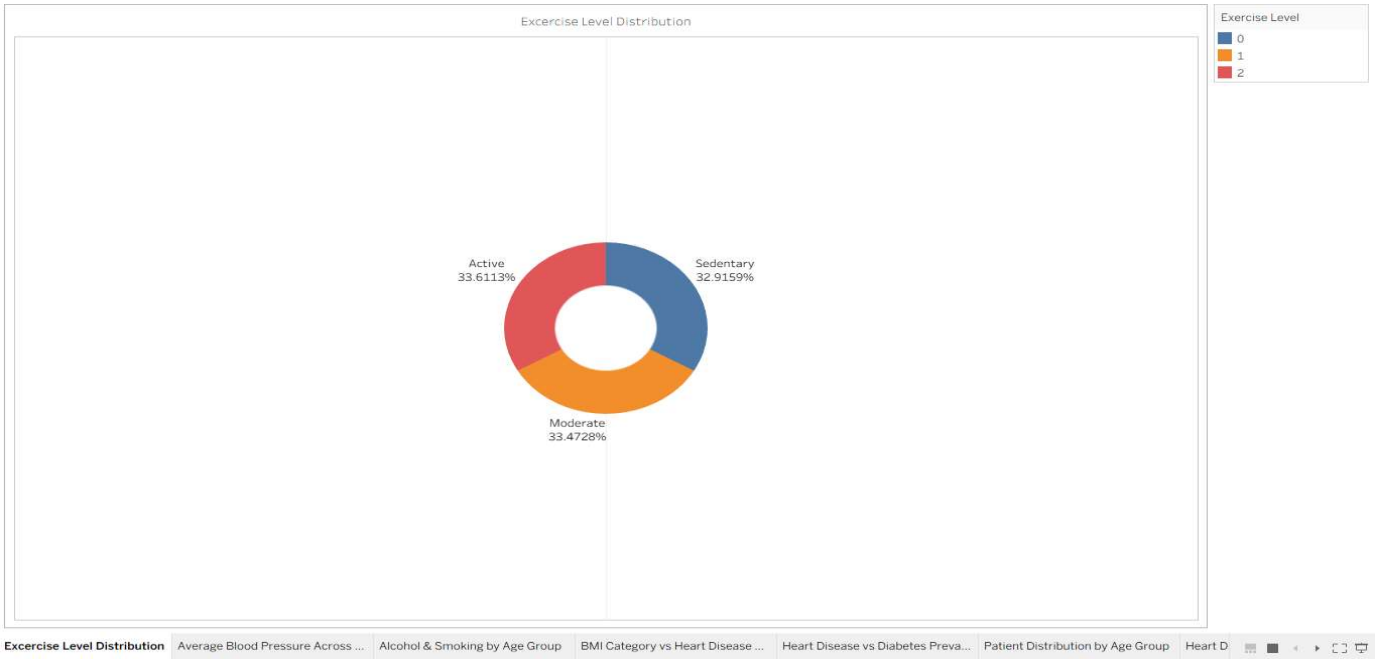

Date	27 October 2026
Team ID	
Project Name	Health360: Smart Healthcare & Risk Factor Analysis
Maximum Marks	5 Marks

Business Question and Visualization:-

The process involves defining specific business questions to guide the creation of meaningful and actionable visualisations in Tableau. In the Health360 project, these questions focus on patient demographics, disease prevalence, lifestyle factors and health indicators. Each question helps identify relevant metrics and select suitable visualisations to understand patterns in the healthcare dataset.

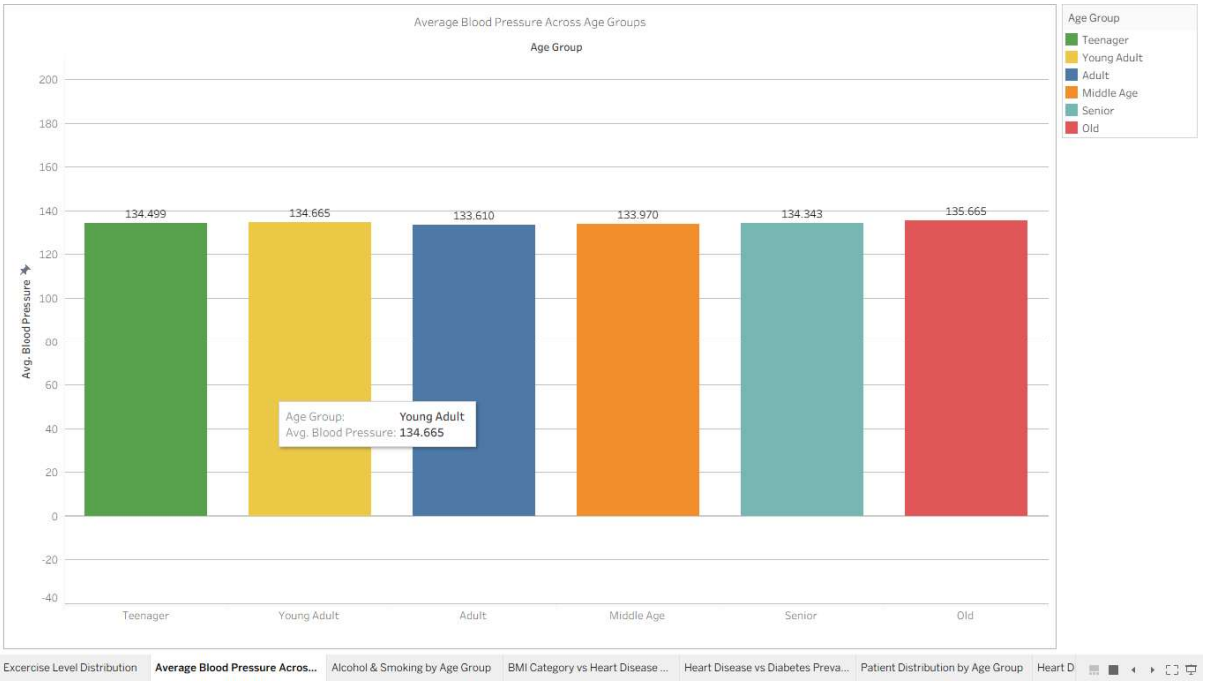

1. How are patients distributed across different exercise levels?

Visualisation: Bar chart or pie chart showing the distribution of patients across exercise-level categories, such as active, moderate and sedentary.

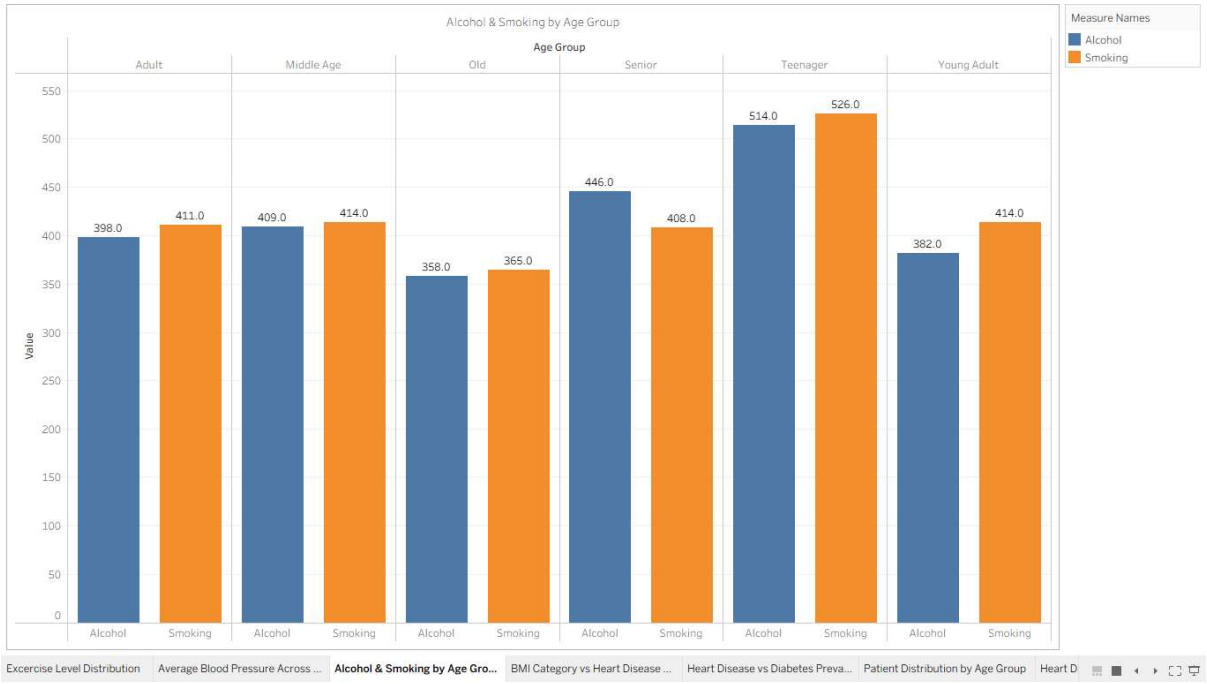

2. How does average blood pressure vary across different age groups?

Visualisation: Line chart or bar chart comparing average blood pressure across age groups.

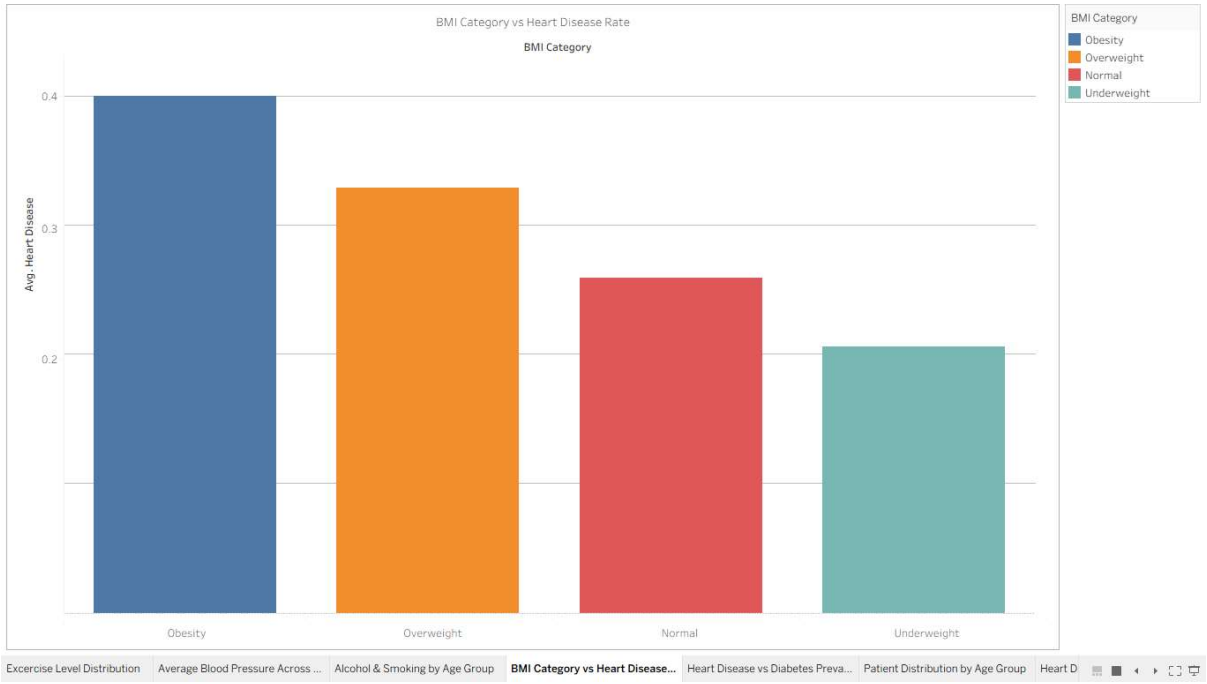

3. How do alcohol consumption and smoking patterns vary across age groups?

Visualisation: Grouped bar chart comparing the alcohol and smoking measures across different age groups.

4. How does the heart disease rate vary across BMI categories?

Visualisation: Bar chart comparing the displayed heart disease rate among underweight, normal, overweight and obesity categories.

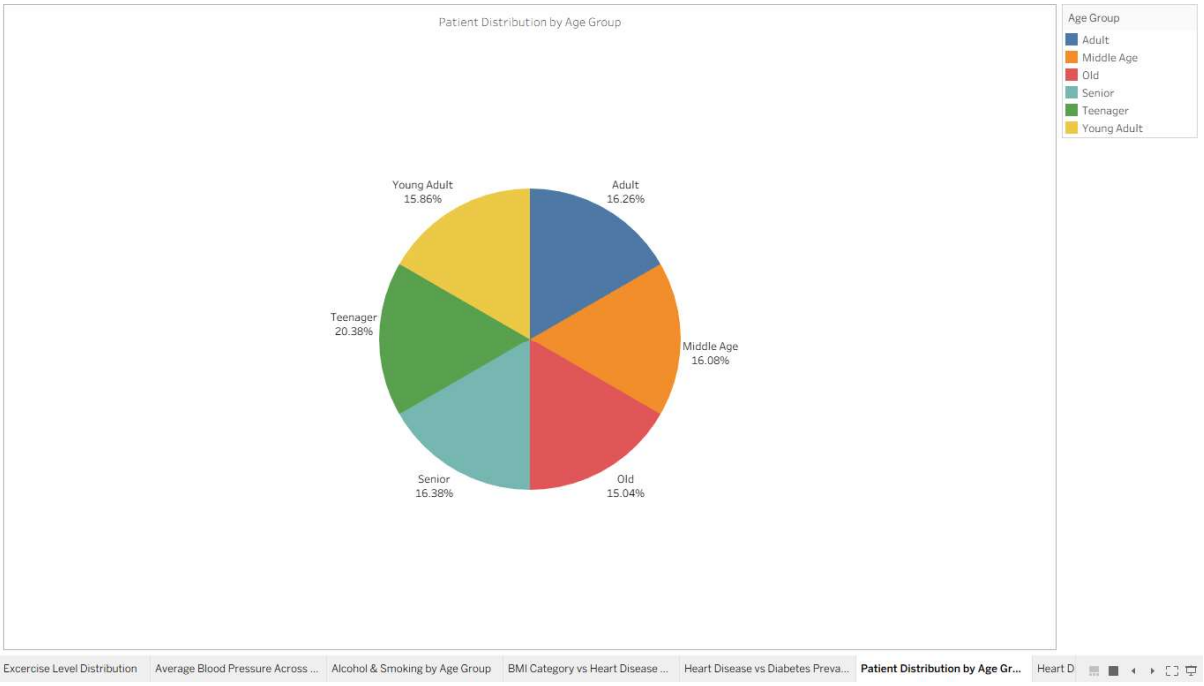

5. How do heart disease and diabetes prevalence compare?

Visualisation: Comparative bar chart showing the displayed prevalence measures for heart disease and diabetes.

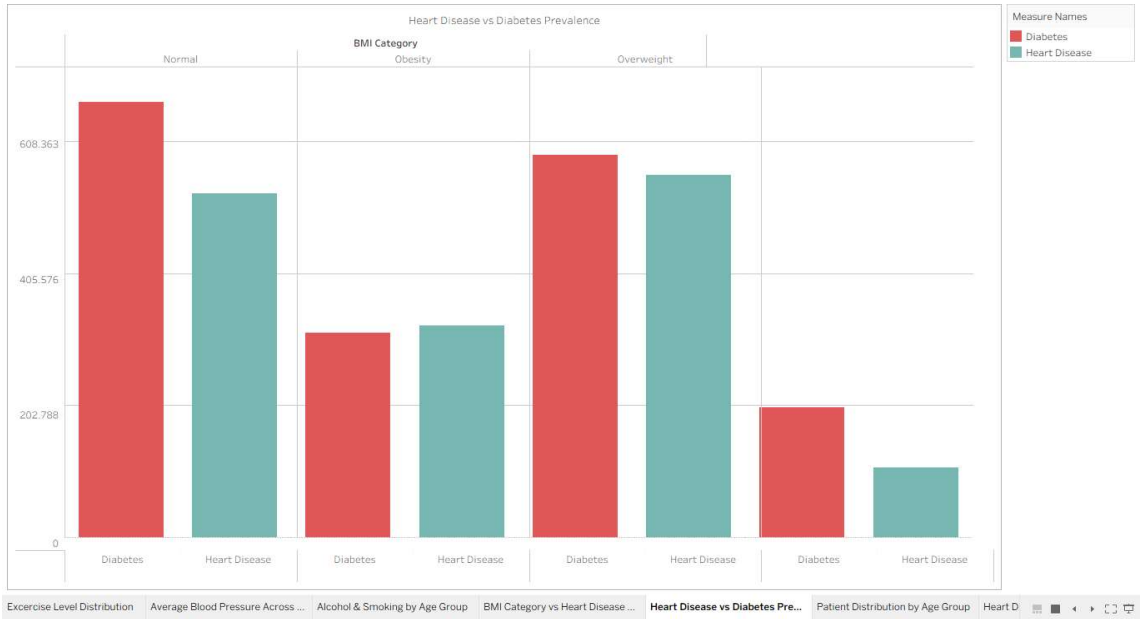

6. How are patients distributed across different age groups?

Visualisation: Bar chart showing the number or percentage of patients in each age group.

7. How does heart disease vary across BMI categories and exercise levels?

Visualisation: Heatmap comparing the displayed heart disease measure across combinations of BMI categories and exercise levels.

8. How does the distribution of age groups vary according to fatigue condition?

Visualisation: Stacked bar chart or grouped bar chart showing the distribution of age groups across the fatigue conditions represented in the dataset.
