Scalability & Future Plan

Date	**27 October 2026**
Team ID	
Project Name	Health360 – Smart Healthcare & Risk Factor Analysis
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current Tableau-based healthcare analytics solution can scale to accommodate larger datasets, additional users, and advanced analytical features. It also presents a roadmap for future improvements.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Dataset-dependent analysis	Insights are limited to the records and fields available in the source dataset.	High
2	Manual data refresh	New data requires updating the Tableau data source and republishing views.	Medium
3	Descriptive analysis only	Current visualizations do not provide validated individual disease predictions.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Published Tableau Public dashboard and story.	Optimize views and data extracts for increased traffic.

2	Data Storage	Dataset used as Tableau data source.	Connect to a governed database or data warehouse for larger datasets.
3	Performance	Interactive charts and filters.	Reduce unnecessary calculations, optimize extracts and visual loading.
4	Security	Publicly shared visualizations using non-sensitive data.	Use restricted-access analytics and de-identified data for real patient records.

Future Roadmap:

Phase	**Planned Feature / Enhancement**	**Target Timeline**	**Expected Impact**
Phase 1	Improve dashboard filters, labels and usability.	Short term	Faster navigation and clearer insights.
Phase 2	Automate data refresh and expand dataset coverage.	Medium term	More current and comprehensive analysis.
Phase 3	Add validated risk models and role-based access where appropriate.	Long term	Advanced analytics with stronger privacy safeguards.
